### **DETAILED ACTION**

1. The disclosure is objected to because of the following informalities: There appears to be a typographical error in the title describing an “LST Test...” it is assumed by the examiner that “LSI Test...” was meant instead.

Appropriate correction is required.

### ***Drawings***

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2863

4. Claim 1 rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,397,353 to Orlidge et al.

With regard to claim 1 Orlidge et al. discloses a test program protection method (see abstract), with translating a source file in which an LSI test program is stored by using a primary key owned by a program provider (see column 6 line 62-65), to create a distribution file and a secondary key (see column 2 line 66 through column 3 line 4 & column 4 line 4-11), and authorizing creation of an object file of the test program only when the distribution file and the secondary key are used (see column 4 line 11-22).

***Allowable Subject Matter***

5. Claims 4 and 5 allowed.
6. Claims 2 and 3 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. The following is a statement of reasons for the indication of allowable subject matter:
- The primary reason for the allowance of claims 2 and 3 is the inclusion of the method step of including a restriction on the number of times of compilations provided by the secondary key. It is this step found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claims 4 and 5 is the inclusion of the method steps being protecting an LSI test program by inputting via a test head an enciphered test pattern into the LSI, and providing a decoder in the LSI which deciphers the enciphered test pattern to provide the deciphered test pattern to an LSI core. It is these steps found in each of the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

### ***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 5,286,962 to Fujioka et al. because it teaches an IC card with fraudulent use prevention using memory protection.

U.S. Patent No. 6,449,741 to Organ et al. because it teaches a test platform for LSI including a test head for interfacing.

U.S. Patent No. 6,601,203 to Asano et al. because it teaches an LSI test program generator.

U.S. Patent No. 6,725,407 to Richter et al. because it teaches protecting data of a self test in an LSI.
